

Student Quiz Score Ranker

A lecturer wants to rank students based on their total quiz score for the week. Each student has a single total score (already computed), and the lecturer wants to display the ranked list neatly.

Develop a Java program that stores student names and their total quiz scores.

Then display students in decreasing order of score (highest first). Use at least 8 students with fictitious names.

Example Input

Student	Total Quiz Score
Ama	41
Kojo	36
Yaw	45
Efua	29

Expected Output

Yaw scored: 45

Ama scored: 41

Kojo scored: 36

Efua scored: 29

Requirements

- Use **only 1-D arrays**.
- When sorting scores, the student names must remain correctly matched.
- Your program should work even if the number of students changes (without rewriting the sorting logic).

Questions to Think About

1. Why are **two 1-D arrays** enough to represent this data?
2. What sorting approach did you use and why?
3. How did you prevent names and scores from getting mismatched?

Employee Work Hours Organizer

A company maintains records of its employees and the number of hours each employee has worked in a given week. The HR department wants a simple program to process and display this information in an organized manner.

Develop a Java program that takes the names of employees and their daily work hours (Mon-Fri), calculates the total weekly hours for each employee, and displays the employees in increasing order of their total weekly hours worked. You can use any fictitious names for employees and there will be a minimum of 8 employees.

Example Input

Assume the company has the following records for 4 employees

Employee	Mon	Tue	Wed	Thu	Fri
Alice	8	7	9	6	5
Bob	6	5	8	7	6
Charlie	7	8	6	5	8
Diana	5	6	5	4	3

Expected Output

```
Diana worked for: 23 hours
Bob worked for: 32 hours
Charlie worked for: 34 hours
Alice worked for: 35 hours
```

Questions to think

How did you store your data (e.g., 1-D array, 2-D array)? Why?

How did you sort employees?

Suppose that the number of employees has increased. How will your program consider that without changing any code?

Submission: Submit a pdf version of your programs on Canvas. Include screenshots of the output below the programs in your pdf file.
